### 1. Introduction

### What is Strategic Environmental Assessment (SEA)?

When public bodies are preparing plans, programmes and strategies, an assessment of their effect on the environment is undertaken. The public bodies preparing plans, programmes or strategies are the 'Responsible Authorities' for those documents.

The purpose of SEA is to ensure that information on the environmental effects of a plan, programme or policy are gathered and made available to plan-makers and decision takers as it is prepared and implemented. The overarching aim of SEA is to provide a high level of protection for the environment, to reduce environmental impact and to enhance environmental outcomes. It also ensures that policies and proposals are informed by relevant environmental information and provides further opportunities for people to get involved in the process.

In doing so, SEA aims to:

- integrate environmental factors into plan preparation and decision-making
- improve plans and enhance environmental protection
- increase public participation in decision making
- facilitate openness and transparency

Stage	Activity	
Screening	Determining if The Historic Environment Strategy for Scotland is likely to have significant environmental effects and whether an SEA is required.	
Scoping	Deciding on the scope and level of detail for the assessment and the consultation period. This is done in liaison with NatureScot (NS) and the Scottish Environment Protection Agency (SEPA).	
Assessment, mitigation and enhancement	Testing the contents of The Historic Environment Strategy for Scotland as it is developed, identifying mitigation measures and looking at ways to enhance positive effects.	
Environmental Report	Publishing an Environmental Report on the findings of the assessment and consulting on that report and The Historic Environment Strategy for Scotland.	
Adoption & Monitoring	Providing information on the adopted The Historic Environment Strategy for Scotland, how consultation comments have been taken into account and methods for monitoring the significant environmental effects arising from its implementation.	

Table 1: The key SEA Stages for The Historic Environment Strategy

### What is the purpose of this report?

The purpose of this report is to document the findings of our environmental assessment of the draft Historic Environment Strategy for Scotland. In doing so, it highlights the types of environmental issues that we have considered, at a strategic level, as being relevant for the actions that are likely to be brought forward. Where possible we have sought to identify the most significant effects (both positive and negative) and where relevant, suggest mitigation measures or opportunities for enhancement.

This report has been prepared in accordance with the Environmental Assessment (Scotland) Act 2005. This legislation sets out the process of undertaking SEA, from screening (where relevant) and scoping at the outset, to assessment, the preparation of an Environmental Report, and public consultation.

### Background to The Historic Environment Strategy for Scotland

"Our Place in Time: The Historic Environment Strategy for Scotland, 2014 – 2024" (known by its acronym of OPiT) was published in 2014 and set out the vision of how Scotland's historic environment can be understood, valued, cared for and enjoyed.

The existing strategic priorities in OPiT are:

- Ensuring the cultural, social, environmental, and economic value of our heritage continue to contribute to Scotland's wellbeing.
- Investigating and recording our historic environment to continually develop our knowledge, understanding and interpretation of the past, and how best to conserve, sustain and protect it.
- Caring for and protecting the historic environment in order to both enjoy and benefit from it, and to conserve and enhance it for future generations.
- Sharing and celebrating the richness and significance of our historic environment.

In February 2022, the Minister for Culture, Europe and International Development, and Minister with Special Responsibilities for Ukrainian Refugees, Neil Gray MSP, commissioned Historic Environment Scotland to conduct a review of OPiT.

The commission noted that the strategic context had changed considerably since OPiT was first published, highlighting the increased focus on tackling inequality, on community empowerment, on digital, and on prioritising work to combat the effects of the climate emergency. The review provides an opportunity to redefine the context and set the direction of this important strategy.

The objectives of the review were to:

- Ensure that OPiT is fit for purpose in a post-COVID world and sets the right direction for the sector for the next 5-10years.
- Involve stakeholders, partners, and communities in the review and development of the new strategy, by adopting an inclusive and participatory approach to engagement.
- Ensure that the new strategy aligns to and supports the achievement of Scotland's National Performance Framework and other Scotlish Government

strategies and priorities, including National Planning Framework 4 and the national strategies for culture and Scotland's museums.

- Prioritises Scotland's recovery and renewal post COVID-19, and the creation of a more resilient and sustainable sector.
- Articulates the contribution the historic environment makes to Scotland's wellbeing economy and net zero commitments.

# What was the process for developing the draft Historic Environment Strategy for Scotland?

The review was carried out by a project team composed of staff from Scottish Government, Historic Environment Scotland, Built Environment Forum Scotland (BEFS), and National Lottery Heritage Fund (NLHF). The Our Place in Time CEO's Forum, who formed as part of the delivery mechanism for OPiT, oversaw the review project and the drafting of the strategy for consultation. The OPiT CEO's Forum is chaired by the CEO of HES and members represent BEFS, COSLA, Historic Houses Scotland, Museums Galleries Scotland, NLHF Scotland, National Trust for Scotland, Society of Antiquaries Scotland, Scottish Churches Trust (Heritage Trust Network), Scottish Government (Culture and Historic Environment Division), Scottish Historic Buildings Trust (Heritage Trust Network), Volunteer Scotland.

The review was launched at a stakeholder event held in Edinburgh in June 2022. This event, opened by the Minister, Neil Gray MSP, was the start of a national conversation, attended by both sector and wider sector stakeholders, to share ideas on the future focus and priorities for the reviewed strategy.

During June to September 2022, the Project Team and engagement consultants carried out a series of online and in-person engagement workshops for sector stakeholders and beyond.

In total, 18 workshops and events were delivered, attended by 191 organisations and 649 participants. This pre-formal consultation engagement helped to identify key priority themes, outcomes, and actions for the draft strategy, following the objectives of the review commission.

Analysis of workshop outputs identified nine priority areas that present challenges and opportunities for the historic environment. These priority themes were explored in a Prioritisation Workshop with the sector in September 2022 where outcomes and actions were discussed.

The nine identified priority areas were (in alphabetical order):

- Climate change and net zero
- Community/localism
- Equality, diversity and inclusion
- Health and wellbeing
- Innovation, digital and technology
- Policy and advocacy
- Resilience/Sustainability

• Skills and education

Top priorities to come out from the workshop included 'Climate change and net zero', 'Resilience/Sustainability', 'Policy and Advocacy' and 'Skills and education'. However, commentary from those present was that all nine priorities should be included in the strategy in some form.

Following the Prioritisation Workshop, the Drafting Team, with input from the Project Team, began to shape the draft strategy for formal consultation. The first draft was discussed by the OPIT CEO's Forum in October 2022, and a second draft presented to them for approval in November 2022. The draft version for consultation was then signed off by the Minister, Neil Gray MSP, in November 2022.

A mission and three priorities identified during the pre-consultation engagement and defined following review by the Steering Group, have been put forward for consultation. These are:

### Mission

Our mission is to harness the power of the historic environment for the benefit of our society.

### Priorities

- Enabling the transition to net zero
- Empowering vibrant, resilient, and inclusive communities and places
- Building a wellbeing economy

### What comments are being sought?

The Environmental Report accompanies the draft strategy for a 12-week public consultation between Monday 28 November 2022 and Monday 20 February 2023.

Any comments you would like to make on either document are welcomed.

With regards to the Environmental Report, we would welcome views on any aspect of it, but in particular, the detailed findings and predictions for likely significant effects set out within Section 4, the main questions to consider are:

Has our environmental assessment identified the likely environmental effects of the options?

Do you think there are any additional mitigation, enhancement, or monitoring measures that should be considered?

Do you have any other comments on the environmental assessment?

### 2. Environmental Context

### What environmental information has been used to inform the assessment? One of the early stages of the SEA process is to consider the relationship of The Historic Environmental Strategy for Scotland to other relevant policies, plans, strategies (PPS) and their environmental objectives. This allows key environmental objectives to be identified for consideration during the strategy preparation process. It is also important to identify both the plans, programmes and strategies that will influence the Strategy and those that will be influenced by the Strategy itself. An understanding of the context and the hierarchy that the Strategy sits within is also useful for giving early thought to mitigation measures and where they may be best implemented.

Annex B contains a detailed review of the list of key plans, programmes and strategies and current legalisation considered to be most directly relevant to The Historic Environment Strategy for Scotland and includes details of how their environment objectives have been considered as part of the scoping exercise.

### What existing environmental objectives have been taken into account?

The key environmental protection objectives identified from our review of legislation, policies, plans and strategies therefore are:

- To halt the loss of biodiversity and continue to reverse previous losses through targeted action for species and habitats
- To protect and enhance species, habitats and ecosystems
- To protect, enhance and where appropriate restore landscape character, local distinctiveness and scenic value
- To protect and where appropriate enhance the historic environment
- To increase awareness, understanding and enjoyment of the natural and historic environment
- To promote and encourage opportunities for people of all abilities to enjoy access to wildlife and the countryside
- To promote sustainable development
- To reduce the exposure of sensitive receptors to poor air quality
- To protect and enhance the water environment (with a requirement to ensure that the status of all waters are protected from deterioration)
- To protect soil resources from erosion and pollution
- To reduce our contribution to climate change and be positioned to respond to the predicted effects of climate change
- To improve health and wellbeing through access (including equality of access) to good quality natural, historic and built environments.
- To recognise the need to shape places which are nurturing of positive health, wellbeing and resilience.
- To make plans for local areas which meet the needs and ambitions of local people, and which give weight to the voice and views of local communities.

- To ensure that Scotland's built heritage remains one of the main motivators for visits to Scotland
- To make the most of our existing assets and resources and to encourage the adoption of circular economy principles

### What environmental baseline information has been gathered?

To establish the environmental effects of The Historic Environment Strategy for Scotland, it is necessary to understand the environmental baseline of the area that is likely to be affected. Schedule 3 of the Act lists the environmental topics that should be considered in SEA.

To focus the SEA, baseline information has been gathered on the environmental issues that have been 'scoped in' and identified as likely to be affected by the strategy.

Annex D provides a detailed baseline, information about the environmental issues relevant to the strategy, and baseline sources.

### 3. Approach to the Assessment

# What aspects of the environment could The Historic Environment Strategy for Scotland affect?

A key part of the scoping process in SEA is to identify whether the environmental receptors set out in schedule 3 of the Act are likely to be affected by the Strategy. This can lead to some environmental receptors being "scoped out" of the assessment. The scoping process helps to focus the SEA on the key significant issues.

Based on the environmental protection objectives identified above and in Annex B, an assessment was undertaken to identify the environmental topics that are likely to be affected by the Strategy. The Consultation Authorities were broadly supportive of this approach, with some specific recommendations which are detailed at Annex C. Table 2 below sets out the scoping of SEA environmental receptors:

SEA receptor	Scoped in / out	Potential issues arising from the new strategy and justification for scoping in or out.	
Climatic factors	In	The predicted effects of climate change are likely to have implications for the historic environment at a strategic level particularly through coastal erosion, increased incidence of extreme weather and the resultant impacts on our historic environment resource. The strategy may therefore have a role in the sector's contribution to effective climate change adaptation and the opportunities and challenges for the historic environment in relation to contributing towards net zero targets.	
Air	Out	We do not envisage any significant issues in relation to air quality in Scotland (i.e. ambient air quality, polluting processes, odour)	
Biodiversity, flora and fauna	In	Current historic environment policy, and public bodies exercising functions across the sector, must have regard to the promotion of biodiversit as per the Nature Conservation (Scotland) Act 2004. We anticipate that these requirements, along with other objectives for furthering biodiversity through historic environment objectives, will remain as part of any revised framework. While this topic was screened out of the original	
		environmental assessment, we consider that, given the declaration of a biodiversity crisis and emerging work to update Scotland's Biodiversity	

### Table 2: Scoping of SEA environmental receptors

SEA receptor	Scoped in / out	Potential issues arising from the new strategy and justification for scoping in or out.
		Strategy, we consider that it will be important to be mindful of linkages between the updated strategic priorities and biodiversity. However, we are unsure whether any relationship or causal impact is likely to be significant but will keep this topic under review as the assessment progresses. Consequently, we propose to scope this topic into the assessment as a precautionary measure to help to identify potential enhancements in relation to this topic
Water	Out	It is unlikely that the strategy will give rise to any activities relating to discharges to groundwater, discharges to surface water, abstractions, removal of sediments and water management works (e.g., replacement of weirs). Flooding is and will continue to be a significant issue for the historic environment, however we have considered this under our assessment of climatic factors (e.g., the ability to manage and adapt to increased flood risk).
Soil	Out	Beyond soil's potential to preserve aspects of the historic environment, it is unlikely that the strategy will exacerbate or address any environmental issues that relate to this topic (e.g., soil sealing, soil as a raw material, biomass/food resources). While it is widely acknowledged that there is a need for functions and activities within the historic environment sector to consider impacts upon soil (particularly archaeology), we do not envisage significant effects arising in relation to this topic at this strategic level.
Landscape	In	The linkages between cultural and natural landscapes are recognised and the potential for significant effects on the baseline condition of Scotland's natural landscape character and scenic value will be explored. In light of this landscape has been scoped into the assessment.
Cultural heritage	In	The historic environment is the main subject matter of the policy and is therefore it is anticipated that significant effects on this resource are likely. The strategy will serve as a key document for the sector and will set the vision, outcomes, and objectives for the strategy period.

SEA receptor	Scoped in / out	Potential issues arising from the new strategy and justification for scoping in or out.
Population and human health	In	Scotland's historic environment has a key role to play in strengthening communities and creating better places. It provides the context for our everyday lives and the environments in which we live, work and play are part of an important connection between people and place. How these environments and assets are used, maintained and protected can have profound effects on the wellbeing and health of all that interact with them.
Material assets	In	There are strong links between the historic environment and material assets. These links range from the materials that are required to support the historic environment (and their availability) to the role the historic environment plays in providing our existing infrastructure. We therefore are of the view that significant effects on this topic are likely.

How has The Historic Environment Strategy for Scotland been assessed? SEA objectives were developed for each of the environmental receptors scoped into the assessment. These are supported by more detailed assessment criteria. The SEA objectives and criteria are set out in Table 3 and show what was considered during the assessment.

Only actions intended for national actors were included in the assessment. Actions in the consultation draft of the strategy are split into 'Nationally we will' and 'Locally you can,' with national actors being considered public sector and local government stakeholders (i.e., in planning departments), and heritage organisations and charities with a national footprint. Local actions are suggested actions local and voluntary groups, communities, and individuals may wish to undertake, and for this reason, they were scoped out of the strategic environmental assessment

Actions under each priority have been developed to be at a high level and with a degree of flexibility, reflective of the strategy's role as a sector strategy and the extent of delivery not yet known. Sector feedback during engagement was for the strategy to act as a manifesto, and the consultation will be seeking commitment from organisations in the sector and beyond to help deliver these actions. Many actions are focused on policy and advocacy, which featured as a sector priority during engagement, however, as a result, the sector is not the decision-maker in these actions, and so their extent of success and delivery is limited by factor's outside of the strategy's control.

Not all actions and KPIs have been assessed. This is because they do not all have strategic environmental impact. For completeness, these actions and objectives

have been included in the matrix but have been 'greyed out' to show they have not been assessed.

During assessment, recommendations have been made to improve the environmental effects under the SEA objective criteria. High-level recommendations have been included in the Summary of Assessment Findings (Section 4) and further recommendations can be found in the Detailed Assessment in Annex A.

The cumulative effects of the actions have been considered under each priority and for the mission itself. These can be found in the Summary of Assessment Findings (Section 4). Cross-cutting effects, which are a result of interrelationships between topic areas, such as climate change and cultural heritage, or landscape and cultural heritage, have been considered in the assessment.

Environmental receptor	SEA objective	How will the strategy affect…
Biodiversity, flora & fauna	To safeguard and enhance biodiversity	Habitats and green / blue networks
Climatic factors	Reduce the causes of climate change	CO2 and greenhouse gas emissions
	Contribute to effective adaptation to the predicted effects of climate change	Effective adaptation to the effects of climate change
Cultural heritage	Safeguard and, where appropriate, enhance the historic environment.	The safeguarding of designated tangible features of the historic environment
		The safeguarding of undesignated / unknown tangible features of the historic environment
		The safeguarding of intangible features of the historic environment
		Elements of the historic environment which have been identified as at risk

Table 3: The SEA objectives and assessment criteria

Environmental receptor	SEA objective	How will the strategy affect
		Address the consequences of climate change for the historic environment
Landscape	To safeguard and enhance the distinct identity, the diverse character and the special qualities of Scotland's landscapes as a whole	The protection of landscape character, local distinctiveness and scenic value
Material assets	Sustainable use of existing assets Support local	Sustainable use or reuse of existing infrastructure, materials or assets
	infrastructure To support high quality place making Support circular economy and zero waste principles	Creation of high quality places and spaces
		Reduce waste and promote uptake of sustainable. traditional materials
Population and human health.	Promote celebration, understanding, enjoyment and access to the natural	Access to the historic environment
	and cultural heritage Support healthy living and working environments	Understanding of the value of the historic environment
	Reduce inequalities	Community involvement in decisions affecting their places and spaces.
		The condition of the historic environment as a place to work, live and play

### How were alternatives identified and assessed?

The inclusion and exclusion of priorities and actions in the Strategy presented for consultation have been developed through pre-consultation engagement, and reviewed by the strategy's Steering Group, the Our Place In Time CEO's Forum.

As part of the strategy's drafting, priorities identified in the engagement phase were refined into aims and a mission statement. These aims were considered at high-level by the Steering Group, and were subsequently refocused and redefined into four, and then, three final priorities. The alternative aims included in previous drafts, and the fourth priority, have been assessed in the detailed assessment at Annex A as 'Alternatives Considered.' As they did not have KPIs and actions developed for them, the assessment has focused on the aim itself.

Alternatives identified during the process of developing the KPIs and actions have been included in the assessment matrix under the relevant KPI. These alternatives were assessed against the assessment criteria and compared to the environmental effects they would produce against those of the selected action.

Retaining the strategic priorities from OPiT has been assessed as 'Reasonable Alternatives'. See Annex A.

Final inclusion, exclusion, and amendments to the priorities, including the mission, the KPIs and their actions, will be informed by the consultation results and further planned engagement during the public consultation period.

# How has the SEA helped to avoid or minimise negative environmental impacts and enhance positive effects?

Environmental considerations have informed development of the strategy from the onset. This is in line with the objectives of the review, and through ensuring the strategy aligns to existing and future legalisation and policy, including the forthcoming National Planning Framework 4 and Biodiversity Strategy (expected early 2023). The included diagram in the strategy draft (Figure 1, Page 26) shows the strategy's placing amongst Scottish Government policies and strategies, Scotland's National Performance Framework, and the United Nation's Sustainable Development Goals.

The SEA has helped to provide an objective and extensive assessment of the emerging strategy and its options, helping to inform the most environmentally sustainable outcome. It has identified where enhancements can be made, and where care and mitigation is needed to ensure that the most positive impact, or at the very least minimal or neutral effect, can be achieved. No significant negative effects have been found in the SEA topics scoped in, but the process has identified actions where mitigation will be required, and where extra consideration should be taken during design and implementation and has made recommendations accordingly.

Elements of the SEA framework will be utilised to help develop and evaluate some project-level actions, emanating from the high-level actions in the strategy, and specifically where the SEA has flagged them as benefitting from this approach.

However, it is important to note that the SEA is not the only determinant for the final version of the strategy, and other impact assessments, and information and

recommendations provided during the public consultation period, will need to be considered alongside other matters in the final version.

Additions and amendments following consultation will be assessed and included in the Post Adoption statement.

### How have we accounted for any gaps or assumptions?

The strategy is a high-level document for the historic environment sector in Scotland. The consultation draft has been developed collaboratively, with input from many stakeholders, and under a timeframe of Spring 2023 to publish the final version.

Consultation is an important stage for the strategy and the consultation draft has been prepared to encourage discussion on all parts of it.

The strategy's mission, KPIs, and actions are not spatial. They are broad and aspirational in nature. They have been developed as such to enable the variety of sector partners to deliver them, and in line with pre-consultation feedback from the sector to make it a manifesto for the sector. These considerations mean that the extent of delivery, and the delivery partners for them, are not yet known for many of the actions. This has been taken into account during the assessment.

Any gaps during the assessment have been highlighted as uncertain and included under mitigation and enhancement. Assumptions have been formed by consideration of the strategy's subject matter, the historic environment, and that all actions are intended to produce significant positive effects for it. These positive effects would be seen most acutely in the SEA receptors most directly connected to the historic environment; these are cultural heritage, landscape, and material assets. Where assumptions have been made in the assessment, the strategy's principles have been accounted for as a guide to how the actions will be designed and implemented; most notably with reference to the principles to care for and protect heritage assets (tangible and intangible), and to act on the climate and biodiversity crises.

The strategy is now at public consultation phase. Consultation responses will be analysed, and the analysis will help inform any changes to the strategy, including its mission, KPIs and actions. Questions on delivery mechanism, including a specific one asking respondents if they can help deliver and how, have been included and should help inform further environmental assessment. For the SEA, changes following consultation will be picked up and assessed in the Post-Adoption Statement, where further details on the delivery mechanism may be known to help address gaps in the current assessment.

### 4. Assessment findings

### **Summary of Assessment Findings**

The full detailed assessment, including recommendations, can be found as Annex A.

# *Mission: Our mission is to harness the power of the historic environment for the benefit of our society*

The mission, taken to be the cumulation of all actions and activity under the strategy, has been assessed as being the overall environmental effects of the strategy. See Table 4 below.

It has been assessed as having significantly positive environmental effects across climatic factors, cultural heritage, landscape, and population and human health.

The effects on material assets have been assessed to be significantly positive on many aspects of this receptor, including all those linked to manmade material assets, but an uncertain effect on natural material assets. The uncertain assessment is due to the full detail of all actions and activity not being known at this stage. The risk of adverse effects on material assets is, however, considered to be low, with greater likelihood of there being positive environment effects, given the mitigation in place, and the principles through which the strategy will be delivered.

The environmental effects on biodiversity, flora and fauna have been assessed to have an uncertain effect. This is due to the full detail of all actions and activity not being known at this stage. The risk of adverse effects on biodiversity, flora, and fauna is considered to be low, with greater likelihood of there being significantly positive effects overall, given the mitigations in place, and the principles through which the strategy will be delivered.

No significantly negative environmental effects have been identified.

### Priority: Enabling the transition to Net Zero

This priority has been assessed as having significantly positive environmental effects for climatic factors, cultural heritage, landscape, and population and human health.

The effects on material assets have been assessed to be significantly positive on many aspects of this receptor, including all those linked to manmade material assets, but an uncertain effect on natural material assets. The uncertain assessment is due to the full detail of all actions and activity not being known at this stage. The risk of adverse effects on material assets is, however, considered to be low, with greater likelihood of there being positive environment effects, given the mitigation in place, and the principles through which the strategy will be delivered.

The environment effects on biodiversity, flora, and fauna have been assessed to have an uncertain effect. This is due to the full detail of all actions and activity not being known at this stage. The risk of adverse effects on biodiversity, flora, and fauna is considered to be low, with greater likelihood of there being positive effects, given the mitigations in place, and the principles through which the strategy will be delivered.

### Priority: Empowering vibrant, resilient communities and places

This priority has been assessed as having significantly positive effects for cultural heritage, landscape, population and human health.

The effects on material assets have been assessed to be significantly positive on many aspects of this topic, including all those linked to manmade material assets, but an uncertain effect on natural material assets. The uncertain assessment is due to the full detail of all actions and activity not being known at this stage. The risk of adverse effects on material assets is, however, considered to be low, with greater likelihood of there being positive environment effects, given the mitigation in place, and the principles through which the strategy will be delivered.

Climatic factors and biodiversity, flora, and fauna have been assessed as having minimal or neutral effects. Although the assessment notes that there be could be significantly positive effects for climatic factors as a secondary outcome of this priority. It is **recommended** that enhancement be considered for these two SEA receptors as actions under this priority are designed, implemented and incorporated into the scope of delivery.

### Priority: Building a Wellbeing Economy

This priority has been assessed as having significantly positive effects for cultural heritage, and population and human health.

Climatic factors has been assessed to have significantly positive effects on many aspects of this topic, but also the potential of an uncertain effect as some actions are limited by factors outside of the strategy's control, or too little detail of their delivery is known. It is **recommended** that mitigation is put in place for actions and activity under this priority, which could either have an adverse effect on this receptor, or an uncertain effect.

Landscape and material assets have both been assessed as having positive effects, with enhancements to be considered to build on these positive effects.

Biodiversity, flora, and fauna has been assessed as having an uncertain effect. This is because not all actions and activity, and the scope of them, are known at this stage. Whilst no spatial actions are outlined under this priority, some actions involve working with planning and development, and so the effects on biodiversity, flora, and fauna has been assessed as uncertain. It is **recommended** that mitigation is put in place for actions and activity under this priority, which could either have an adverse effect on this receptor, or an uncertain effect.

### Table 4: Overall Assessment of Environmental Effects of the Strategy

### Legend:

++	Significantly positive effects		
+	Positive effects		
0	Minor or neutral effect		
?	Uncertain effects		
-	Adverse effects		
	Significantly adverse effects		

SEA receptor	Assessment pre-mitigation / enhancement	Suggested mitigation / enhancement	Assessment post- mitigation / enhancement	Comment
Biodiversity, flora, and fauna	?	Mitigation will be through planning policies protecting the natural environment, the inclusion of enhancement and protection policies and outcomes for the natural environment in the other strategies and plans the strategy will align to and support, including Scottish Government's National Performance Outcomes and the forthcoming Biodiversity Strategy, and through the principles of the strategy which acknowledges the climate and biodiversity crises and commits the sector to acting upon them. Actions will also be brought forward in alignment with emerging and updated guidance for biodiversity, flora and fauna such as Developing with Nature and Wildlife Management.	++	Through mitigation, there is potential to have significantly positive environmental effects for this receptor.
Climatic factors	++	None	++	Cumulation of all actions and activity will have significantly positive environmental effects without mitigation.

SEA receptor	Assessment pre-mitigation / enhancement	Suggested mitigation / enhancement	Assessment post- mitigation / enhancement	Comment
Cultural heritage	++	None	++	Cumulation of all actions and activity will have significantly positive environmental effects without mitigation.
Landscape	++	None	++	Cumulation of all actions and activity will have significantly positive environmental effects without mitigation.
Material assets	++/?	Mitigation for natural material assets, which has been identified as uncertain under this receptor, will be mitigated through planning policies protecting the natural environment, the inclusion of enhancement and protection policies and outcomes for the natural environment in the other strategies and plans the strategy will align to and support, including Scottish Government's National Performance Outcomes and the forthcoming Biodiversity Strategy, and through the principles of the strategy which acknowledges the climate and biodiversity crises and commits the sector to acting upon them. Actions will also be brought forward in alignment with emerging and updated guidance for biodiversity, flora and fauna such as Developing with Nature and Wildlife Management.	++	This receptor has been already been assessed as having significantly positive effects for manmade material assets, and, through mitigation, all aspects under this receptor have the potential to have significantly positive environmental effects.
Population and human health	++	None	++	Cumulation of all actions and activity will have significantly positive environmental effects without mitigation.

### **Cumulative effects**

Cumulative effects have been considered to the be product of all actions under a priority. The overall cumulative effect of the priorities and actions has been assessed under the mission statement.

The cumulative effects are not expected to affect any of the SEA receptors scoped out during the screening stage.

### Mitigation, recommendations, and monitoring

No significant negative effects have been identified during this assessment; however, monitoring and mitigation will remain important throughout the lifetime of the strategy to ensure any unintended or unidentified adverse environmental effects are avoided, or resolved, during its implementation.

Mitigation and enhancement measures are included in the detailed assessment matrices and will be factored in during the design and delivery of these actions and priorities, where they have been identified and recommended. Recommendations can be found in the detailed assessment under the KPIs of each priority.

Monitoring of the strategy will be through annual reporting and performance measurement against the strategy's KPIs. It will be important to understand how the strategy is affecting the environment once it is implemented, especially for those receptors assessed to be uncertain. Alongside annual reporting and performance measurement, a delivery mechanism is to be established, where monitoring of environment effects can be incorporated into remits. Monitoring via the delivery mechanism should help identify any unintended environmental effects, or those not predicted through the assessment, and allow for appropriate mitigation to be sought. Both monitoring and reporting should provide a way for additional enhancement measures to be considered.

### 5. Next Steps

The public consultation period is for 12 weeks and will end on Monday 20 February 2023. The consultation can be accessed via Historic Environment Scotland Citizen Space portal: <u>https://haveyoursay.historicenvironment.scot</u> and the strategy draft, the pre-consultation engagement report, and both the Islands Communities and Business and Regulatory Impact Assessment can be downloaded from the 'Publications' section of the Historic Environment Scotland website.

Following close of the consultation, and subsequent analysis of responses, the final version of the strategy will be prepared.

All changes to the mission, priorities, KPIs and actions will be screened to consider if they raise significant environmental issues that have not already been taken into consideration in the environmental assessment. If the potential for significant environmental effects is identified, an assessment will be undertaken of their impact, and reported in the SEA Post Adoption Statement. This will be published along with the finalised plan.

The SEA Post Adoption Statement will show how the Environmental Report (and all the comments expressed on it) has been taken into account in the adopted Historic Environment Strategy for Scotland.

### Annex A: Detailed Assessment Findings

Work with Scottish Government to embed the historic environment in Scotland's natural capital accounts, and to share learning and good practice on how heritage can promote biodiversity	Commentary: Due to the nature of this action, and with its focus on promoting diversity, it is anticipated that it will have significantly positive effet tangible aspects of the cultural and natural environment. Achievement of this action would in historic environment assets being included in the S Government's Natural Capital Asset Index. Due to positive links between heritage engagement and wellbeing, and noting NatureScot cited reservental Health Foundation quoting links to being in nature as a favoured way to cope with the stress of the pandemic, it is anticipated the results will have positive effects on population and human health.

Ensure grant programmes and funding have positive, community-focused	Score	?	?	+	+	+	+					
outcomes and objectives	Commentary: As these grant programmes and funding go to heritage causes, their implementation should have positive environment effects on the SEA topics most immediately connected to the historic environment, this includes cultural heritage, landscape, and material assets. Due to the positive relationship between wellbeing and heritage engagement, there is likely to be a positive effect to population and human health. As the outputs of the funded projects and programmes are not known at this stage, and with applications and funding rounds happening through the lifetime of the strategy, there is no way to know the nature and outputs of all projects and programmes which will be funded under this high-level action. As a result, the environmental effects on biodiversity, flora and fauna and on climatic factors are unknown and uncertain.											
	enhancement, or a both biodiversity re	<i>Mitigation / Enhancement:</i> Mitigation in relation to the two identified SEA topics with uncertain effects can be ensured by ensuring provision for their enhancement, or at a minimum not negatively affecting, in the conditions of grant or funding approval and through their monitoring. To support objectives for both biodiversity restoration and gain, consideration could be given towards adding 'nature positive' in addition to community-focused as part of any changes to grant programmes.										
	Recommendation: Consider amending/expanding this activity to include support for biodiversity restoration and gain and related nature positive outcomes.											
Provide funding and capacity building programmes for community groups	Score	0	0	+	+	+	+					
ooking to engage with and care for the historic environment	Commentary: Due to the focus on engagement and care of the historic environment for this high-level action, there is the potential for this action's implementation to have positive effects on the SEA topics most immediately connected with the historic environment, this includes cultural heritage, landscape and material assets. Due to the positive relationship between wellbeing and heritage engagement, there is likely to be a positive effect to population and human health. Minimal or neutral effects on the other SEA topics are likely.											
	<i>Mitigation / Enhancement:</i> Provision for the remaining SEA topics, identified as having minor or neutral effect, can be made in the conditions of funding and through the capacity building programmes, this will increase the likelihood of a positive environmental effect. These funds and capacity building programmes will be carried out under the principles of the strategy which works towards resolving the climate and biodiversity crises.											
			0	++	++	++	+/?					
Work collaboratively to ensure that heritage is embedded in local place planning and destination management	Score	0	U		Commentary: As this high-level action is focused on the inclusion of heritage in local place planning and destination management, there is anticipated significant positive environmental effects on the SEA topics most immediately connected to the historic environment, this includes cultural heritage, landscape, and material assets, which meets the SEA environmental objectives for these topics. Due to the historic environment's statutory role in the planning system, at both local government and national level, and the stake the sector has in tourism to Scotland, this action has been assessed as likely to be successful and so produce environmental effects. There are also likely positive effects on population and human health through the established positive link with wellbeing and heritage engagement and through improvements being made to heritage assets, notably built heritage assets where people dwell, live, and socialise. However, for each local authority and community group, both their heritage needs and their heritage provision are variable, therefore, there cannot be a determined positive benefit on population and human health at this stage. As this action is about embedding heritage, it is mindful that heritage is one of competing considerations for local place planning and destination management decision and plan makers. As a result, minimal or neutral effects on the other SEA topics are likely.							

Work to promote shared understanding of intangible cultural heritage (ICH) across public bodies, and to align support for communities working with ICH	Score	0	0	+	?	+				
	<i>Commentary:</i> This action is about national level actors working together on shared objectives and delivering the same approach. As intangible of heritage is very broad, including crafts and traditional building techniques, along with practices, stories, traditions, rituals, objects, artefacts, and spaces, this action through its support to communities has potential to touch upon many SEA topics, although its impact is likely to be either und neutral, with anticipated positive effects to cultural heritage and materials assets. Landscape has been assessed as uncertain as community's we projects may be seeking to make landscape change, in line with traditional craft and ways of living, and returning to how the landscape had previous shaped by human activity. Principles of ICH are based on sustainable and traditional use of land and material, so the risk of adverse effects is likely to working with ICH across the lifetime of the strategy, detail of their activity is unknown.									
	Mitigation / Enhancement: Consideration of how to enhance positive effects across the topics should be a key element of developing further det will work in practice and embedded at project level.

	a communities in the start and the state	
	communities in shaping and making local decisions. The Islands (Scotland) Act aims to 'island-proof' decision-making across the public sector will ensure the interests of islanders are reflected in future legislation and policy from the very outset.	<ul> <li><u>Community Empowerment</u> <u>Act (Scotland) 2015</u></li> <li><u>The Islands (Scotland) Act</u> <u>2018</u></li> <li><u>Scotland's National Strategy</u> <u>for Economic Transformation</u> (2022)</li> <li><u>Let's get Scotland Walking –</u> <u>The National Walking</u> <u>Strategy</u></li> </ul>
Landscape	Landscape policies aim to not only safeguard protected areas, but to recognise and conserve wider landscapes. These may not be formally designated but make an important contribution to the quality of environment. Landscape is at the core of a shared and unifying approach to managing change in our landscape in ways which maximise public benefit for present and future generations. Natural Heritage Futures policies aim to guide the sustainable management and use of Scotland's nature and landscapes.	<ul> <li>Scotland's Third Land Use Strategy 2021 to 2026</li> <li>The European Landscape Convention (2000)</li> <li>NatureScot Landscape Policy Framework</li> <li>NatureScot Landscape Policy – Wild Land</li> <li>Scottish Geodiversity Charter 2018-2023</li> <li>People, Place and Landscape – A position statement from NatureScot and Historic Environment Scotland</li> <li>NatureScot – Natural Heritage Futures</li> </ul>
Cultural Heritage	The key document for considering the historic environment in strategy preparation is the Historic Environment Scotland for Scotland (HEPS). This document sets out the principles and policies to direct decision-making which affects the historic environment. HEP3 states that "plans, programmes, polices and strategies, and the allocation of resources should be approached in a way that protects and promotes the historic environment". Historic environment policies aim to identify and protect historic buildings and sites from inappropriate development and damage. Policies extend beyond specific designated sites to reflect the value of undesignated / unknown sites, wider townscapes, the setting of monuments and historic buildings, and wider cultural landscapes.	<ul> <li><u>Historic Environment Policy</u> for Scotland (2019)</li> <li><u>Our Place in Time: The</u> <u>Historic Environment Strategy</u> for Scotland (2014)</li> <li><u>National Planning Framework</u> <u>4 (emerging)</u></li> <li><u>Scottish Planning Policy</u> (SPP) (2014)</li> <li><u>A Culture Strategy for</u> <u>Scotland (2020)</u></li> <li><u>Archaeology Strategy</u></li> <li><u>Green Recovery Statement</u> for the Historic Environment</li> <li><u>Historic Environment</u> <u>Scotland: Managing Change</u> in the Historic Environment <u>Guidance Notes</u></li> <li><u>Creating Places: A Policy</u> <u>Statement on Architecture</u> <u>and Place</u> (2013)</li> <li><u>Designing Streets: A Policy</u> <u>Statement for Scotland</u> (2010)</li> </ul>

	The Historic Environment Policy for Scotland (HEPS) sets out principles and policies to direct decision-making which affects the historic environment.	
Biodiversity, Flora and Fauna	Public bodies in exercising their functions, must have regard to the promotion of biodiversity, as per the Nature Conservation (Scotland) Act 2004. Biodiversity policies from international to local levels aim in particular to conserve habitats, species and ecosystems. Halting the decline of key species is important, and where possible remedial action and enhancement should be implemented in degraded areas. Policies also note the importance of an ecosystem approach – a holistic, landscape approach to biodiversity conservation that goes beyond the traditional emphasis on protecting individual sites.	<ul> <li><u>The Birds Directive</u> <u>2009/147/EC</u></li> <li><u>The Habitats Directive</u> <u>1992/43/EEC</u></li> <li><u>Wildlife and Countryside Act</u> <u>1981</u></li> <li><u>Nature Conservation</u> (Scotland) Act 2004</li> <li><u>Wildlife and Natural</u> <u>Environment (Scotland) Act</u> <u>2011</u></li> <li><u>Scotland's Biodiversity – It's</u> <u>In Your Hands (2004)</u></li> <li><u>2020 Challenge for Scotland's</u> <u>Biodiversity (2013)</u></li> <li><u>Scottish Biodiversity Strategy</u> <u>post-2020: statement of intent</u> (new strategy emerging)</li> </ul>
Material Assets	Agricultural and forestry policies promote sustainable land use, environmental protection and stewardship, and emphasise the importance of delivering public goods out with market mechanisms. Policy sets a target of increasing forest cover to 25% of land cover. The planning system highlights the need to allow the development of high quality, well designed, energy efficient housing. Efficient design will contribute to climate change abatement targets, as will transport emission reductions. Redevelopment of urban and rural brownfield sites is preferred to development on greenfield sites Place is an agent of change. Good buildings and places can enrich our lives as individuals and as a society in many different ways. The Infrastructure Investment Plan recognises that we need to do more with our existing assets. A sustainable investment hierarchy is introduced that prioritises the maintenance, repair and	<ul> <li><u>The Scottish Energy Strategy:</u> <u>The Future of Energy in</u> <u>Scotland</u> (2017)</li> <li><u>Energy Efficient Scotland:</u> <u>Route Map</u> (2018)</li> <li><u>Hydrogen Policy Statement</u></li> <li><u>Heat in Buildings Strategy –</u> <u>achieving net zero emissions</u> <u>in Scotland's buildings</u></li> <li><u>Scotland's Forestry Strategy</u> <u>2019-2029</u></li> <li><u>National Transport Strategy 2</u> (2020)</li> <li><u>The Strategic Transport</u> <u>Projects Review (STPR)</u> (2008)</li> <li><u>Strategic Transport Projects</u> <u>Review 2 (emerging)</u></li> <li><u>Making Things Last: A</u> <u>Circular Economy Strategy for</u> <u>Scotland</u> (2016)</li> <li><u>Land use – getting the best</u> <u>from our land: strategy 2021</u> <u>to 2026</u></li> <li><u>Realising Scotland's full</u> <u>potential in a digital world: A</u> <u>Digital Strategy for</u> <u>Scotland</u> (2017)</li> </ul>

P		
	reuse of our existing assets over new build. The Town Centre First Principle asks that government, local authorities, the wider public sector, businesses and communities put the health of town centres at the heart of proportionate and best-value decision making. The Scottish Government's Strategy for Housing states a need for new housing supply, and also that bringing empty homes back into active use would represent an important contribution to effective new supply. Tourism is a key economic driver and the historic environment is one of the main motivators for tourism activity in	<ul> <li>Scotland Outlook 2030</li> <li>Tourism Scotland 2020</li> <li>People Make Heritage (2016)</li> <li>A National Mission with Local Impact: Infrastructure Investment Plan for Scotland 2021-22 to 2025-26</li> <li>Housing to 2040</li> <li>National Planning Framework 3 (2014)</li> <li>Scottish Planning Policy (2014)</li> <li>National Planning Framework 4 (emerging)</li> <li>Sustainable and regenerative farming – next steps: Statement (2022)</li> <li>Town Centre First Principle</li> <li>Town Centre Action Plan 2 (2022)</li> </ul>

# Annex C – Scoping comments from Consultation Authorities

NatureScot comments	Our response
We agree with the topics scoped-in. We particularly welcome inclusion this time of Biodiversity in recognition of the biodiversity crisis, noting it will be kept under review during consideration of potential interactions on this topic emerge.	N/A
Table 4 baseline data: please add, in the landscape section, landscape character assessment (LCA) and coastal character assessment. As the Report says, it is not just designated or other valued areas that are relevant, and LCA provides complete national coverage of landscape information. The sources section should include the NatureScot website which hosts the national dataset.	Added
SEPA comments	Our response
SEPA comments We agree with the environmental topics scoped into the assessment and are satisfied with the proposed assessment methodology. It is noted that flooding will be considered under climatic factors. We also welcome the inclusion within this topic of considering the challenges and opportunities for the historic environment of reducing emissions to contribute towards net zero targets.	Our response Priority within strategy to 'Enable net-zero' which focus on reducing emissions to contribute towards net zero targets

#### **Cultural Heritage**

The historic environment is a legacy of our long history, from the 'eco homes' at Skara Brae, to the post-war homes and churches built by Scotland's leading architects, and with a great deal in between. Scotland's historic environment is a unique asset, attracting over 18million visitors in 2019 and generating £4.4 billion for Scotland's economy and supporting 68,000 full time equivalent jobs. As such, the historic environment makes a valuable contribution to the Scottish Government's strategic objectives and the purpose, values and national outcomes stated in the National Performance Framework.

Scotland has six World Heritage Sites, over 47,000 listed buildings, over 8,000 scheduled monuments, and more than 600 conservation areas. Nearly 400 sites are currently identified in the Inventory of Gardens and Designed Landscapes, and 40 sites are on the Inventory of Battlefields, and 8 nationally designated Historic Marine Protected Areas. The actual extent of archaeological remains in Scotland is vast, with nationally designated sites making up less than 10% of all known historic sites, and with local authorities maintaining their own Historic Environment Record.

Landscapes are a key part of cultural heritage. The European Landscape Convention defines 'Landscape' as an area, as perceived by people, whose visual features and character are the result of the action and interaction of natural and/or human factors. They are a vital part of our sense of place and general well-being

One in five of Scotland's dwellings are more than 100 years old (built pre-1919). The Buildings at Risk Register provides information on properties of architectural or

historic merit in Scotland that are considered to be at risk. There are 2,203 buildings on the register considered to be at risk. The Scottish House Condition Survey 2019 notes that 71% of dwellings build pre-1919 have critical elements in disrepair (this refers to weather tightness and structural stability).

83% of scheduled monuments are perceived to be in an optimal of general satisfactory condition (Scotland's Historic Environment Audit 2018).

#### Population and Human Health

The environment provides a variety of services that are beneficial to human health and wellbeing including opportunities for education and recreation. Access to historic environment sites, forests, woodlands and nature conservation sites, as well as the wider environment, can help to promote healthier lifestyles, having positive effects on both physical and mental health.

The quality and condition of buildings in which we live can impact health conditions and affect our quality of life. Poor housing conditions, including those which are damp and cold, are associated with poor health. Poorly maintained housing and neglected community spaces can have a negative impact on physical and mental well-being, whilst high quality environments can create a sense of place and improve wellbeing.

Research by Historic Environment in 2019 demonstrated that there is a positive link between heritage engagement and wellbeing reporting. However, the historic environment needs to be managed in a sustainable way to ensure that the positive and distinctive contribution it can make to our well-being, landscape, and sense of history, identity and place can be realised.

Place-making and Community Planning are increasingly important areas in which the connection between people and place and the associated benefits (for example; health, wellbeing and social inclusion) can be seen as a driver towards improved health and wellbeing outcomes.

# **Climatic Factors**

**Dynamic Coast – National** Coastal Change Assessment

The Climate Change Committee reports that over the last 30 years, average temperature in Scotland has risen by 0.5°C. Scottish winters have become 5% wetter and sea level around the Scottish coast has increased by up to 3cm each decade.

Trends

These trends are expected to continue with Scotland experiencing more extreme weather events, higher maximum temperatures and longer heat spells, with fewer days of snow and frost, and more rain on the wettest days of the year.

The impacts of climate change on the historic environment are wide ranging and potentially devastating. Our archaeology and coastal landscapes are vulnerable to coastal erosion, rises in sea level, flooding and storminess. Some of Scotland's unique and special sites such as Skara Brae in Orkney are most at risk.

Built heritage can also suffer adverse effects from storms, subsidence and increased wetting and weathering. More rainfall will mean that traditional buildings will be wetter for longer periods of time resulting in increased weathering of stone, algal and fungal growth, corrosion of metals and timber decay. The spread of pests and

disease as a result of a warmer climate and milder wetter winters can also have effects upon various materials and furnishings used in traditional buildings.

Measures to improve energy efficiency in traditional buildings need to be considered carefully with thought given to the carbon footprint, embodied energy, longevity and sustainability of existing and replacement materials.

For example, reducing air leakage in traditional buildings to prevent heat loss might result in condensation and mould growth, with damaging effects on the building fabric and the health of those living there. Careful consideration also needs to be given to the renewable energy projects which may have a detrimental effect on the character or setting of historic environment features, landscapes and townscapes.

We also need to be mindful of the relationship between resource use and its link with climatic factors, looking to reduce waste and use/reuse sustainable materials.

#### Landscape (including seascapes and urban and suburban landscapes)

Scotland's diverse and distinctive landscapes are a significant part of the country's natural and cultural heritage, making an important and positive contribution to the economic, cultural, and social wellbeing of the nation.

The European Landscape Convention aims are to promote protection, management and planning of all landscapes, not just protected areas. Landscape is a component of a number of environmental designations, and there is an intricate relationship between landscape, conservation, other environmental objectives, community identity, wellbeing, and economic development. It is a key part of our cultural heritage which has huge economic potential and is a vital part of our sense of place and general well-being. This relationship between the perception of natural and historic landscape means that the sustainable management of the historic environment can impact on landscape as a whole. Landscape Character Assessments describe landscape character in a systemic way. They are used heavily in policy making, development planning and management and form an important tool in the appropriate consideration of landscape-scale change. Coastal Character Assessment utilises a similar process for coasts. These assessments underpin marine development plans.

#### Material assets

Forestry policies promote sustainable land use, environmental protection and stewardship, and emphasise the importance of delivering public goods out with market mechanisms. Scotland's Forestry Strategy 2019-2029 sets specific targets for thousands of new hectares of forest and woodland to be created yearly, so by 2032 forest and woodland cover 21% of the total area of Scotland. The Strategy seeks to increase the use of Scottish wood products in construction to 3.0 million/m<sup>3</sup> by 2031/2032 and to create and restore thousands of hectares of native woodland.

Scotland's forests are the most productive in the UK. Our woodlands and forests offer many benefits: economic (including timber, non-timber and tourism), health and wellbeing, carbon storage and ecosystems services. The National Forest Estate covers nearly 9% of Scotland, extending to over 650,000 hectares. There are 323 Scheduled Monuments and 31 listed buildings on the Forestry Commission Scotland Designated Historic Assets Register, and around 12,000 individual historic environment features recorded on the Forester Geographic Information System (GIS) Heritage Module.

In 2018, 5,603,812 hectares of land were classified to be in agricultural use, with 579,847 hectares of common grazing. This is over 70% of Scotland's land. High

Nature Value farming, which are areas with a high proportion of seminatural vegetation and low-intensity agriculture, make up 40% of Scotland's agricultural Scottish Government are currently consulting on a new Agriculture Bill which will support farming and food production in Scotland to tackle the climate and biodiversity crises and achieve Net Zero targets by 2045.

Construction and demolition accounts for around half of all waste produced in Scotland. Scotland has met the European Union target of 70% recycling and reuse of construction and demolition waste by 2020 every year since 2011 and latest data suggests a recycling rate of 97% in 2018. The Scottish Government is currently developing a Circular Economy Bill and Routemap. There is work package within the Routemap to embed circular construction practices to reduce resource needs, reduce waste and carbon, and encourage refurbishment and reuse.

The historic environment, and its upkeep, is inherently sustainable as it reuses existing buildings and minimises the use of new resources. Traditional buildings have embedded energy (the energy required to extract, process, manufacture, transport and install building materials). Although traditional buildings usually have a lower thermal performance than new buildings, continuing to use them can avoid some new carbon by reducing the need for new buildings and demolition; whilst through a fabric first approach and retrofit their energy efficiency can be improved.

The vast majority of buildings that will be in use by 2050, estimated to be over 80%, already exist. In Scotland, traditionally constructed buildings make up a large portion of building stock, with 19% of Scottish dwellings being built before 1919. Around 9% of households live in conservation areas, which cover about 0.3% of Scotland's land area. The Scottish House Condition Survey 2019 notes that 71% of pre-1919 dwellings have critical elements in disrepair (such as weather tightness and structural stability).

Much of Scotland's existing infrastructure constitutes the historic environment, including canals, communications equipment, railways, piers, bridges and civic buildings, from the World Heritage Site of the Forth Bridge to the Loch Katrine Water Works. Many elements of the road, rail and canal networks across the country are of traditional construction. The Infrastructure Commission report notes that 44% of the Scottish Courts and Tribunal Services estate dates from before 1960 with 86% of these assets being historic, listed and pre-1900. Much of our existing green and blue infrastructure is of cultural significance, such as parks and gardens, designed landscapes, battlefields, ports, hydro schemes or canals.

### Biodiversity, flora, and fauna

Baseline Data	Sources
Special Protection Areas	NatureScot National Datasets
Special Areas of Conservation	Protected Areas Register
National Nature Reserves	National Biodiversity Network
Sites of Special Scientific	Joint Nature Conservation Committee
Interest	Habitats Directive
Local Nature Reserves Woodland (including ancient	National Nature Reserves
and semi-natural) Ramsar Sites	NatureScot: State of Nature Report 2019

Special Protection Areas (SPAs) are selected to protect one or more rare, threatened or vulnerable bird species. Scotland is internationally important for many species of wild birds due to our location in north-west Europe, and our varied range of wild and semi-natural habitats. Scotland has 162 classified SPAs; this includes a suite of 12 marine SPAs which were classified in December 2020. Together they cover an area of around 2.75 million hectares (27,500 square kilometres) of Scotland's land and sea.

A Special Area of Conservation (SAC) protects one or more special habitats and/or species listed in the Habitats Directive. Scotland has 243 designated SACs, including three that border England and two across the 12nm inshore/offshore territorial boundary. Eight designated SACs are entirely in Scotland's offshore waters. Together they cover more than 3.84 million hectares (38,400 square kilometres) of Scotland's land, inshore and offshore waters.

National Nature Reserves (NNRs) are areas of land containing nationally or internationally important habitats and species. Most reserves contain visitor facilities designed and managed to ensure that people can enjoy NNRs without harming or disturbing the wildlife that lives there. Scotland has 43 NNRs which cover just under 2% of Scotland's land area. These include ancient woodlands, remote islands, mountain tips and lowland lochs that are vitally important for migrating birds.

Sites of Special Scientific Interest (SSSIs) are areas of land and water that are considered to best represent our natural heritage in terms of their:

- flora i.e. plants
- fauna i.e. animals
- geology i.e. rocks
- geomorphology i.e. landforms
- a mixture of these natural features

Scotland has 1,422 SSSIs, covering around 1,011,000 hectares or 12.6% of Scotland's land area (above mean low water springs). Sites range in size from a hectare to more than 29,000 hectares in the Cairngorms SSSI. Many SSSIs are also designated as European Special Areas of Conservation or Special Protection Areas.

Local Nature Reserves (LNRs) are areas of natural heritage that are locally important. There are 75 LNRs in Scotland, usually close to towns and cities. Local authorities select and designate LNRs.

Native tree and shrub species are the natural habitats of many native species. Woodland's importance for biodiversity is closely related to its age with wildlife communities, soils and structure in ancient woodlands having had the longest time to develop. In Scotland, ancient woodland is defined as land that is currently wooded and has been continually wooded since at least 1750, so are generally richer in biodiversity than more recent woods. Overgrazing and undergrazing, invasive species and pathogens, fragmentation, neglect, climate change, and poor management are all problems which can affect the condition of woodlands in Scotland.
